

ChE460 -102 – Separation Processes II - 10992 – Spring 2017

(Faculty Memorial Hall 412; Wednesday 6:00 – 9:05 PM)

Instructor: Dr. Saeid Savarmand, Sun Chemical Corporation

Office Hours: Wednesday 5:00 – 6:00 PM at Tiernan 373 Conf. room.

Teaching Assistant: Will be announced once appointed by the dept.

Description: This second course in separations examines nontraditional methods and technologies such as fixed-bed processes, membranes, crystallization, and mechanical separations.

Prerequisites by Course: ChE360 - Separation Processes I

Prerequisites by Topic: Thermodynamics, Heat/Mass Transfer, Calculus/Diff. Equations

Textbooks:

Required: Geankoplis, 4th Ed., Prentice Hall (You already have this book as it is the textbook of ChE260/CHE370).

Recommended:

McCabe, W.L., Smith, J.C. & Harriot, P., “Unit Operations of Chemical Engineering”, 7th Ed., McGraw-Hill.

Seader, J.D. & Henley, E.J. “Separation Process Principles”, 3rd Ed., Wiley

Course Outline:

1. Introductory remarks & Dimensional Analysis.
2. Membrane separation processes
3. Filtration and Centrifugal separation processes
4. Fixed-bed separation processes
5. Evaporation and Drying processes

Assessment/Grading:

- First mid-term exam accounting 20% (Feb. 22nd)
- Second mid-term exam accounting 20% (March 29th)
- Final exam accounting 30% (May 10th)
- Quizzes/homework accounting 15%
- A term project with presentation accounting 15%.
- Course letter grades will be as following: A = 90+; B+ = 85+; B = 75+; C+ = 70+; C = 65+; D = 60+; F < 60.

Quiz/HW Assignments: Quizzes will **NOT** be announced. Once assigned, a HW is due the following week before class time unless otherwise indicated. Please use instructor's office hours for HW related questions as well as other questions/inquiries.

Exams Policy: Only justifiable absence warrants a make-up test.

Classroom Policy: Eating and talking with friends are not permitted in the class. Use of cell phones, notepads, tablets and laptops is not allowed. Cell phones should be silent or preferably turned off.

NJIT Honor Code: The NJIT honor code will be followed at all times.

Attendance: Students are expected to be in the class earlier than the class starts or at least on time. The attendance sheet should be signed at each of the two evening sessions. Missing lectures will negatively affect your performance in this course; so, attendance is strongly recommended.

Policies and Expectations about Exams/Grades

- Students can dispute the exam scores within a week following the announcement of the score. Students cannot dispute their prior exams or HWs after one week or at the end of the semester! After first review of the dispute, if the score is not modified, but the student is unconvinced and asks for an additional review, then s/he assumes the possibility of instructor reviewing the whole exam paper and removing points as well as giving points.
- Students may be asked to return their graded exam papers within a week.
- No cell phones (to be turned off), Ipads, laptops, etc. can be used during the exam.
- Students get 0 for no-show to exams. Make-up exams (no make-up quizzes) may only be given under extreme circumstances (e.g., major close-family emergency, serious accident or acute medical problem) at the sole discretion of the instructor. Students bear the responsibility of due proof and documentation to the Dean of Students. It is the student's responsibility to inform the instructor and Dean of Students ASAP.
- Show all work, otherwise no partial credit means you cannot simply skip important intermediate steps during a calculation/derivation. You will lose significant points even if the final answer is correct.
- In exams, students are required to use high-end calculators to solve non-linear equations, perform linear regression, and spread-sheet calculations. Students are required to know how to perform these operations on their calculators and consult with the user manual and web sources for their specific calculator model.

Groups

- Term projects and group quizzes require groups of no more than 4 students.
- Students can select their group members by communicating their group members with instructor by the end of the second session (Jan 25th, 2017). After that, the students will be assigned to random groupings and no further changes could be made.

Term Project

- Groups of no more than 4 students will choose 3 topics from the topics of the course, such as "gas membrane separations" or "filtration, etc. These topics are communicated with instructor. Due date: Feb 8th, 2017.
- Instructor will assign to each group one of the 3 topics submitted by that group.

- By March 8th, each group will provide at least 4 closely related articles from peer-reviewed chemical engineering journals to instructor. Complete addresses of the articles are necessary so they could be found for review. In case any of the articles are not suitable in terms of their materials and relevance, students are required to provide replacing article(s).
- First drafts of the presentations are due on April 5th. Instructor will provide comments/feedback for final modifications.
- Final presentation are due on April 19th.
- Class presentations start on April 26th randomly. So all groups should be ready for presentation.

Term Project Grading

- The above dates (Feb. 8th, March 8th, April 5th, April 19th, and April 26th) should be respected. Each date accounts for one fifth of the total 15% of the term project. An average of the grades related to each date will provide the total grade. So getting a total average of 100 will provide 15% of the total course grade.
- Each one day delay reduces 10% of that section point. For example, if providing the 3 topics has a 2-day delay, then the maximum grade for Feb. 8th would be 80%, and so on.
- April 26th constitutes the presentation in the class and how it is delivered in class.
- The rubric of the presentation will be communicated with the class so students know what the significant points are to deliver.
- How the materials are to be delivered will be communicated with class in terms of the organization of the presentation, the quality of the slides, timeliness of the presentation, etc.
